

A modern hallway with wood slat walls and a fire curtain. The hallway is brightly lit with recessed ceiling lights. The walls are covered in vertical wood slats. A fire curtain is visible in the background, partially covering a doorway. The floor is covered in a patterned carpet. The overall aesthetic is clean and contemporary.

Introduction

Fire and smoke curtains offer effective and aesthetically pleasing solutions for fire safety. Once installed, these curtains remain discreet, revealing themselves only when deployed. They enable building designers to eliminate non-loadbearing plasterboard walls and costly fire-resistant glazing, while still maintaining compartmentation and ensuring full protection from fire and smoke without compromising the design or ambiance of the space.

At Adexon, we have been dedicated to driving industry improvements and raising standards since 2005. Collaborating with prominent designers, architects, engineers, and contractors, we have earned a reputation for excellence. Our commitment to innovation is reflected in prestigious project wins, which have allowed us to invest in product development and production automation.

Notable achievements include maintenance-free fabric retention, unrivaled smoke sealing capabilities in a fire scenario, and highly automated production processes.

In addition to our core products, we are on a mission to enhance fire safety for everyone. As part of our research, we recognize the essential need for third-party certification, which ensures:

- Accreditation by a UKAS (or equivalent) certified Certification Body.
- Comprehensive product details, including tested sizes and components.
- A Technical Annex in compliance with CE Marking requirements.

What can you expect to be covered?

The CPD seminar on active fire and smoke curtains will discuss the features, benefits, and proper installation and maintenance. These curtains are designed to prevent the spread of fire and smoke in buildings and are often used in conjunction with other fire protection systems.

Areas covered detail the review and application of Active Fire Protection and associated regulations. Specific topics illustrated and discussed in the seminar will be included.

- The different types of fire and smoke curtains available
- The particular building codes and regulations that apply to the use of active fire and smoke curtains.
- The proper installation and maintenance of these fire and smoke curtains, including any testing or inspections.
- Case studies or examples of successful installations of active fire and smoke curtains.
- Best practices for designing and installing active fire and smoke curtains in various buildings and environments.
- Tips for specifying and purchasing active fire and smoke curtains, including how to select the right product for the particular application.
- Common problems and issues that can arise with active fire and smoke curtains, and how to troubleshoot and resolve them.

Booking details

Are you interested in Adexon's RIBA-accredited CPD that covers active fire and smoke curtains in detail?

Give us a call or visit our website to book your firm in.

Please also note, that for face-to-face seminars, there must be a minimum of 5 people attending from the company. Alternatively, a virtual seminar will be held for companies who have under 5 employees attending (we hope you understand the reasoning behind this choice).

We look forward to seeing you!
